## ABOUT THE PROJECT

The ACMIT project (Assessment of Competences using Multiple Intelligences and Theatre) is a 6-day training course in which 20 youth workers from 9 different European countries will come together in A Guarda (Spain) to explore how can the Theory of Multiple Intelligences can be used to guide young people to assess their own competences using non formal and theatrical activities.

The participants will, during these 6 days, experience the activities proposed and will discover their own performance in the 8 areas described by the Multiple Intelligences theory outlined by Howard Gardner. The implemented activities will not only be experienced, but they will also learn tips and techniques that can help them implement these activities with their groups of young people.

The methodology used will be based on the Projecting YOUTH outcomes, an innovative project that developed a comprehensive methodology to help young people discover their own level of competence in each intelligence. This course will be led by Juan Escalona Corral, one of the developers of the Projecting YOUTH project that has further developed the activities and methodology implementing it in several local and international settings (workshops, E+ training activities, youth projects, rural development programmes...).
